

Aigent

Aigent

AI agents that give time back to your business.

What we do

Aigent designs and deploys **AI agent automations** for small-to-medium businesses.

We take repetitive, time-consuming operational work off your plate so founders and teams can focus on **revenue-generating activities**, not internal busywork.

Our agents run quietly in the background — faster execution, fewer errors, and systems that scale without adding headcount.

Who we are

Aigent is a lean automation studio built by operators and engineers.

Our leadership team is led by **Ivy League-trained engineers with Master's degrees in Computer Science / AI**, supported by a **global network of experienced automation engineers**. This structure lets us deliver enterprise-grade agent systems **cost-effectively** for SMBs.

We combine:

- Deep technical execution
- Strong business judgment
- A global, efficient delivery model

No bloated teams. No unnecessary platforms. Just automation that works.

The one-person unicorn Unlock.

You may have heard the concept of the “**one-person unicorn**” — a business where AI agents handle large portions of sales, operations, support, and reporting, allowing a very small team to run a very large company.

That future isn't fully here yet — but **AI agents are what enable it**.

Aigent helps your business move in that direction by:

- Reducing dependence on manual labor
- Turning workflows into autonomous systems
- Letting software do the repetitive work humans shouldn't

You don't need to become a one-person company — but you *can* become a far more leveraged one.

How Aigent helps your business

We build AI agents that:

- **Capture and act on leads instantly**
No delays. No dropped opportunities.
- **Automate internal workflows end-to-end**
Routing, validation, follow-ups, notifications, reporting.
- **Reduce manual work and human error**
Less copy-paste. Cleaner data. Fewer mistakes.
- **Scale operations without hiring**
Revenue grows. Overhead stays flat.

Common use cases:

- Lead intake and qualification
 - CRM updates and data hygiene
 - Customer and prospect follow-ups
 - Sales and ops handoffs
 - Internal alerts and reporting
-

Simple customer story

The problem

A growing B2B software company handled inbound leads manually across multiple channels. Response times were slow, data was inconsistent, and sales reps spent hours each week on admin instead of selling.

What Aigent built

We deployed an AI agent workflow that:

- Captured leads in real time
- Validated and enriched incoming data

- Routed leads instantly to the right sales rep
- Logged activity automatically for visibility and accountability

The result

- Lead response times dropped from hours to minutes
- Zero leads fell through the cracks
- Sales reps reclaimed multiple hours per week
- The company scaled without adding operational headcount

This pattern is repeatable across sales, ops, and support teams.

How we work

1. **Audit** – Identify bottlenecks and wasted effort
2. **Design** – Architect agent workflows around your existing stack
3. **Build & deploy** – Fast, no-code / low-code where possible
4. **Optimize** – Improve as volume and complexity grow

Most engagements launch in **weeks, not months**.

References & inspiration

We draw inspiration from best-in-class AI workflow and agent platforms, including:
